Jameco Part Number 1555112

Data Sheet

**HLMP-Pxxx Series, HLMP-Qxxx Series
HLMP-6xxx Series, HLMP-70xx Series**

Description

Flat Top Package

The HLMP-Pxxx Series flat top lamps use an untinted, nondiffused, truncated lens to provide a wide radiation pattern that is necessary for use in backlighting applications. The flat top lamps are also ideal for use as emitters in light pipe applications.

Dome Packages

The HLMP-6xxx Series dome lamps for use as indicators use a tinted, diffused lens to provide a wide viewing angle with a high on-off contrast ratio. High brightness lamps use an untinted, nondiffused lens to provide a high luminous intensity within a narrow radiation pattern.

Resistor Lamps

The HLMP-6xxx Series 5 volt subminiature lamps with built in current limiting resistors are for use in applications where space is at a premium.

Lead Configurations

All of these devices are made by encapsulating LED chips on axial lead frames to form molded epoxy subminiature lamp packages. A variety of package configuration options is available. These include special surface mount lead configurations, gull wing, yoke lead or Z-bend. Right angle lead bends at 2.54 mm (0.100 inch) and 5.08 mm (0.200 inch) center spacing are available for through hole mounting. For more information refer to Standard SMT and Through Hole Lead Bend Options for Subminiature LED Lamps data sheet.

Features

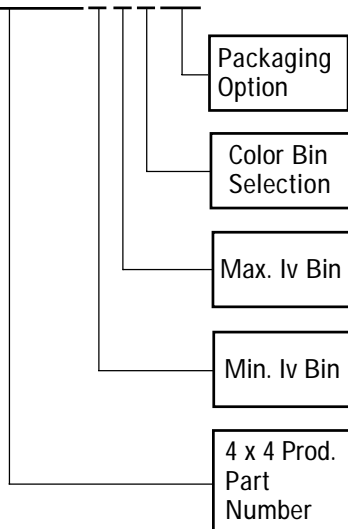

- **Subminiature flat top package**
 - ideal for backlighting and light piping applications
- **Subminiature dome package**
 - diffused dome for wide viewing angle
 - nondiffused dome for high brightness
- **TTL and LSTTL compatible 5 volt resistor lamps**
- **Available in six colors**
- **Ideal for space limited applications**
- **Axial leads**
- **Available with lead configurations for surface mount and through hole PC board mounting**

Ordering Information

HLMX-XXXX-X X X X X

Package Dimensions
(A) Flat Top Lamps

(B) Diffused and Nondiffused

- NOTES:
1. ALL DIMENSIONS ARE IN MILLIMETRES (INCHES).
2. PROTRUDING SUPPORT TAB IS CONNECTED TO CATHODE LEAD.
3. LEAD POLARITY FOR AlGaAs LAMPS IS OPPOSITE TO THE LEAD POLARITY OF SUBMINIATURE LAMPS USING OTHER TECHNOLOGIES.

Figure 1. Proper right angle mounting to a PC board to prevent protruding cathode tab from shorting to anode connection.

Absolute Maximum Ratings at $T_A = 25^\circ\text{C}$

Parameter	Standard Red	DH AS AlGaAs Red	High Eff. Red	Orange	Yellow	High Perf. Green	Emerald Green	Units
DC Forward Current ^[1]	50	30	30	30	20	30	30	mA
Peak Forward Current ^[2]	1000	300	90	90	60	90	90	mA
DC Forward Voltage (Resistor Lamps Only)			6		6	6	6	V
Reverse Voltage ($I_R = 100 \mu\text{A}$)	5	5	5	5	5	5	5	V
Transient Forward Current ^[3] (10 μs Pulse)	2000	500	500	500	500	500	500	mA
Operating Temperature Range:								
Non-Resistor Lamps	-55 to +100	-40 to +100		55 to +100		-40 to +100	-20 to +100	°C
Resistor Lamps				-40 to +85			-20 to +85	
Storage Temperature Range				-55 to +100				°C
For Thru Hole Devices Wave Soldering Temperature [1.6 mm (0.063 in.) from body]				260°C for 5 seconds				
For Surface Mount Devices: Reflow Soldering Temperature				260°C for 20 seconds				

Notes:

1. See Figure 5 for current derating vs. ambient temperature. Derating is not applicable to resistor lamps.
2. Refer to Figure 6 showing Max. Tolerable Peak Current vs. Pulse Duration to establish pulsed operating conditions.
3. The transient peak current is the maximum non-recurring peak current the device can withstand without failure. Do not operate these lamps at this high current.

	Thermal Resistance	$R\theta_{J-PIN}$		170		$^{\circ}\text{C}/\text{W}$	Junction-to-Cathode Lead	
	Luminous Efficacy ^[4]	η_v		595		lm/W		

Notes:

1. The luminous intensity for arrays is tested to assure a 2:1 to 1:0 matching between elements. The average luminous intensity for an array determines its light output category bin. Arrays are binned for luminous intensity to allow I_v matching between arrays.
2. $\theta^{1/2}$ is the off-axis angle where the luminous intensity is half the on-axis value.
3. Dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the single wavelength that defines the color of the device.
4. Radiant intensity, I_e , in watts/steradian, may be calculated from the equation $I_e = I_v / \eta_v$, where I_v is the luminous intensity in candelas and η_v is the luminous efficacy in lumens/watt.
