Introduction

The MxL7213 evaluation board provides a platform to evaluate the features and performance of the MxL7213. The MxL7213 is a dual 13A Power Module optimized for powering Telecom, Networking and Industrial equipment. This manual covers the 13A Dual Phase BGA and LGA Evaluation Boards.

Quick EVB Set Up and Start Up

Factory Settings

In addition to utilizing the 4.5V to 16V input voltage range and dual 13A maximum load current rating capabilities of the MxL7213 Power Module, the Evaluation Board has been set up with the factory default configurations shown below for quick set up and operation. **Do not exceed the EVB maximum load current rating.**

The factory default configuration ([Table 2](#)) for the MxL7213 Evaluation Board is:

- $V_{OUT1} = 3.3V \pm 1.5\%$
- $V_{OUT2} = 5.0V \pm 1.5\%$
- 750kHz Switching Frequency
- CCM mode. For other modes, see [Jumper J44 MODE](#).
- Run is enabled for both channels. See [Jumpers J30 RUN1 and J29 RUN2](#).
- Soft-start is selected for both channels. See [Jumper J26 TRACK1 SEL](#) and [Jumper J25 TRACK2 SEL](#).
- CLKOUT phase is 90 degrees, see [Jumper J45 PHASMD](#).
- Differential remote sense amplifier monitoring V_{OUT1}

Quick Start Up

To quickly see the regulator in operation:

1. Use the factory settings and default configuration. If other settings or components are desired, apply them before the next steps and see [Set-Up Options](#) for more.
2. Connect a turned-off power supply that is within a V_{IN} specification of 4.5V to 16V, (12V typical) to VIN and GND with short, thick leads. Use test pins VIN+ and VIN- to monitor VIN and GND respectively. See locations in [Figure 1](#).
3. For the channel 1 output, connect an electronic load initially set to 0A, that will be no more than the above maximum I_{OUT} (13A), to VOUT1 and GND with short / thick leads. Use test pins VOUT1 (J54) and GND (J49) to monitor VOUT1 and GND respectively. See locations in [Figure 1](#).
4. For the channel 2 output, connect an electronic load initially set to 0A, that will be no more than the above maximum I_{OUT} (13A), to VOUT2 and GND with short, thick leads. Use test pins VOUT2 (J55) and GND (J49) to monitor VOUT2 and GND respectively. See locations in [Figure 1](#).
5. Turn on the power supply and check V_{OUT} of both channels. The EVB will power up and (factory default) regulate the channel 1 output at $3.3V \pm 1.5\%$ (3.251V to 3.349V) and channel 2 output at $5.0V \pm 1.5\%$ (4.925V to 5.075V). Output ripple should be observed across the output capacitors for each channel: C8 for VOUT1 and C22 for VOUT2. Test points J54 and J55 can be used to monitor the ripple for VOUT1 and VOUT2, respectively.
6. Set or vary the load (do not exceed the maximum I_{OUT}) and check V_{OUT} and other desired performance levels such as regulation and efficiency.

See [Configuration and I/O Interfaces](#) and [Load Transient Circuit](#) for more on testing and monitoring. For Single Rail Dual Phase 26A Operation and to vary V_{OUT} see [MxL7213 EVB Mode Selection](#).

Reference Documentation

Please refer to the [MxL7213 Data Sheet](#) for additional information about the MxL7213, including efficiency curves for this configuration with $V_{IN} = 12V$. The datasheet also includes a full list of IC features, pinout, pin descriptions, typical performance characteristics and external component calculations. This manual is meant to be used in conjunction with the datasheet.

This manual provides EVB schematics, PCB layout and bill of materials that can be utilized to assist in your board design. The schematics are also available on the MxL7213 product page.

Ordering Information

Table 1: Evaluation Board Ordering Part Number⁽¹⁾

Power Module	Evaluation Board	Description
MxL7213-AYA-T	MxL7213-EVK-1	MxL7213 LGA Power Module Dual-Phase EVB
MxL7213-ABA-T	MxL7213-EVK-3	MxL7213 BGA Power Module Dual-Phase EVB

1. Refer to www.maxlinear.com/MxL7213 for most up-to-date Ordering Information.

Evaluation Board Overview

The block diagram shown in **Figure 3** illustrates the connection points for the VIN, VOUT1, VOUT2, TRACK, MODE_PLL and RUN pins.

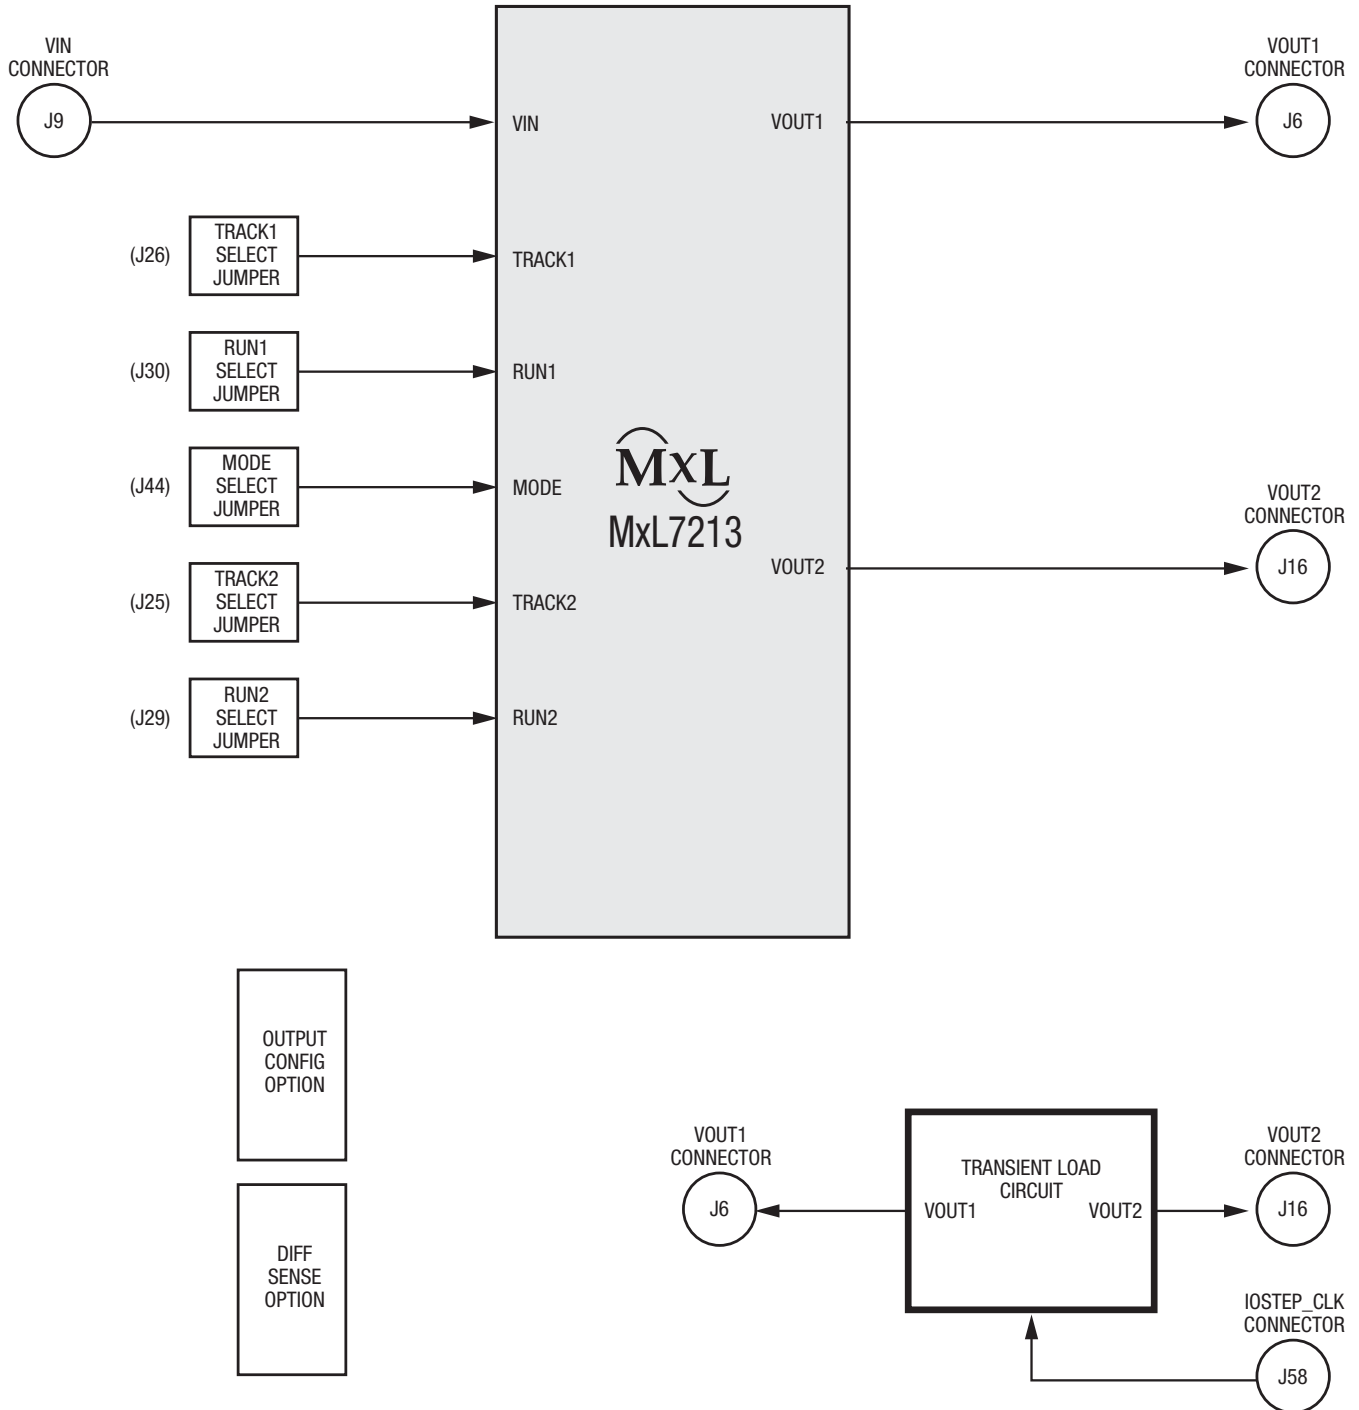

Figure 3: Block Diagram MxL7213 Two Channel EVB

Configuration and I/O Interfaces

MODE

The MODE (J44) jumper is provided for overall device configuration:

Force Continuous Mode, Pulse-Skipping Mode and External Synchronization are selectable.

RUN1, RUN2

A RUN jumper is provided for both channels (J30 for RUN1 and J29 for RUN2).

TRACK1 SEL, TRACK2 SEL

A TRACK jumper is provided for both channels.

VOOUT, EXT and SOFTSTART are selectable.

Test points are allocated for probing of TRACK1 (J26) and TRACK2 (J25).

PHASMD

A CLKOUT (J45) jumper is provided for clock phase selection.

60, 90 or 120 degrees of phase offset is configurable.

EXTVCC

An EXTVCC test point (J2) is provided to monitor or inject EXTVCC.

TEMP

A TEMP test point (J3) is provided to monitor temperature.

PGOOD1, PGOOD2

A PGOOD test point is provided for both channels (J24 for PGOOD1 and J23 for PGOOD2⁽¹⁾).

Both PGOOD signals are tied to INTVCC through 10k Ω resistors.

1. J23 and J24 are mislabeled on the board. J24 is PGOOD1 and J23 is PGOOD2.

SW1, SW2

A SW test point is provided for both switching signals (TP1 for SW1 and TP2 for SW2), and are located on the bottom (back) of the board.

Set-Up Options

Jumpers are factory installed per Table 2 to configure the EVB for operation. Jumper and testing options are described in the next sections. Refer to the product datasheet for additional information.

Table 2: Factory Settings

Jumper	Label	Factory Setting	Description
J44	MODE	Jumper 3-4	FCM
J30	RUN1	Jumper 1-2	On
J29	RUN2	Jumper 1-2	On
J26	TRACK1	Jumper 5-6	Soft-Start
J25	TRACK2	Jumper 5-6	Soft-Start
J45	PHASEMD	No Jumper	90°

Jumper J44 MODE

Table 3: J44 Options

Jumper Options	Description
Jumper 1-2	PSM - Pulse Skipping Mode.
Jumper 3-4	FCM - Force Continuous Mode.
Pin 6	Apply an external clock to pin 6 to put both channels into continuous mode, synchronized to the applied clock.

Jumpers J30 RUN1 and J29 RUN2

Table 4: J30, J29 Options

Jumper Options	Description
Jumper 1-2	On. RUN1/2 connected to VIN.
Jumper 2-3	Off. RUN1/2 connected to GND.

Jumper J26 TRACK1 SEL

Table 5: J26 Options

Jumper Options	Description
Jumper 1-2	V _{OUT2} master track mode.
Jumper 3-4	External master track mode.
Jumper 5-6	Soft start. Track1 connected to cap to GND.

Jumper J25 TRACK2 SEL

Table 6: J25 Options

Jumper Options	Description
Jumper 1-2	V _{OUT1} master track mode.
Jumper 3-4	External master track mode.
Jumper 5-6	Soft start. Track1 connected to cap to GND.

Jumper J45 PHASMD

Table 7: J45 Options

Jumper Options	Description
Jumper 1-2	120°
No Jumper	90°
Jumper 2-3	60°

Test Interfaces

Load Transient Circuit

A load transient circuit is provided to allow optional testing of load transients. The IOSTEP clock input is used to drive the transient signal. The load step generated by the FET (Q1) is very fast; the step slew rate is $>40\text{A}/\mu\text{s}$ for a 6.5A transient load test case.

To measure load transient response for either channel, use the circuit shown in [Figure 4](#). To test CH1, populate R56 and depopulate R57 and apply a small duty cycle pulse signal to IOSTEP CLK input ($\sim 1\%$). Adjust the amplitude of the IOSTEP CLK pulse to set the load current. Start at a pulse amplitude of 2V and increase while monitoring the IOSTEP (J59) voltage. The load current at IOSTEP (J59) is $10\text{mV}/\text{A}$. For an example, a 6.5A load will occur when a 65mV pulse is observed at J59.

To test load transient response on CH2, depopulate R56 and populate R57 and repeat procedure.

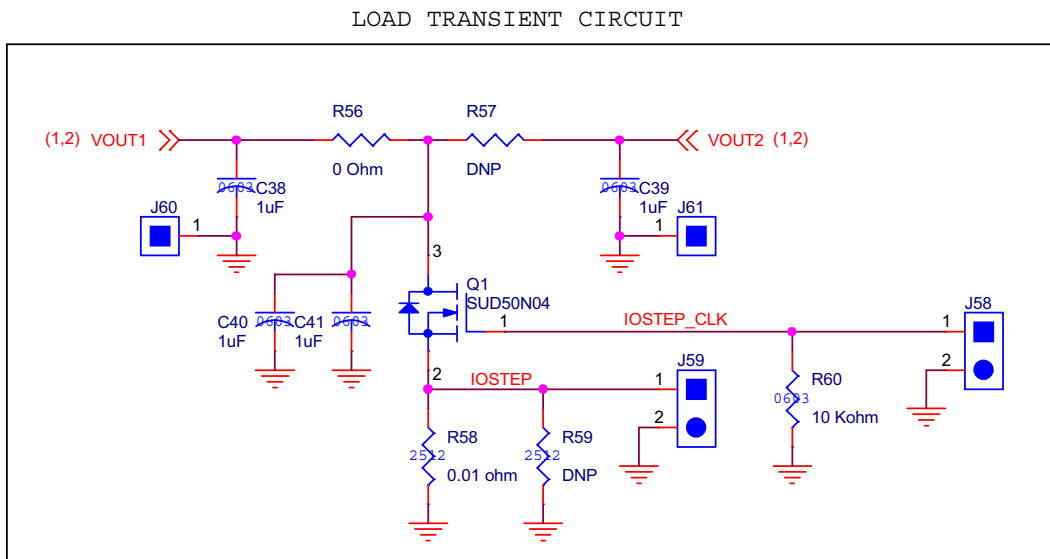

Figure 4: Load Transient Circuit

MxL7213 EVB Mode Selection

The MxL7213 EVB can be configured for 6 different modes of operation:

- Mode 1: Dual 13A with no remote sense amplifier
- Mode 2: Dual 13A with remote sense amplifier on V_{OUT1}
- Mode 3: Dual 13A with remote sense amplifier on V_{OUT2}
- Mode 4: Single 26A with no remote sense amplifier
- Mode 5: Single 26A with remote sense amplifier on V_{OUT1}
- Mode 6: Single 26A with remote sense amplifier on V_{OUT2}

The stuffing options to configure the EVB into each of the 6 modes are shown below with the block diagram for each mode on the next page.

Table 8: Board Stuffing for Operation Mode Selection

Pin Function	Component	Mode 1 Dual Rail Single Phase Diff Amp NC	Mode 2 Dual Rail Single Phase Diff Amp V_{OUT1}	Mode 3 Dual Rail Single Phase Diff Amp V_{OUT2}	Mode 4 Single Rail Dual Phase Diff Amp NC	Mode 5 Single Rail Dual Phase Diff Amp V_{OUT1}	Mode 6 Single Rail Dual Phase Diff Amp V_{OUT2}
