MPLAB Starter Kit for PIC18F MCU

The MPLAB Starter Kit for PIC18F MCU contains everything needed to experience the high performance and versatility of the PIC18F microcontroller family. It includes an on-board debugger/programming capability as well as USB communication, a capacitive touch pad, potentiometer, acceleration sensor, MicroSD memory card, and an OLED display. The board can function as a USB mouse, joystick or mass-storage device (thumb drive) all using the on-board capacitive touch sense pads.
