

# FSA7830

## 8-Channel Voltage MUX with Integrated Voltage Divider and OVP

### Features

- Voltage Supply, 2.7 to 5.5 V
- Input Voltage Range, 0 to 5.4 V
- Up to 8-Channel Inputs
- Integrated 1/3, 2/3 Voltage Divider
- Integrated Over-Voltage Protection and Assertion
- Total Introduced Offset <math>< \pm 10 \text{ mV}</math>
- $I_{CC} < 100 \mu\text{A}</math>,  $I_{shut\text{down}} < 1 \mu\text{A}</math>$$
- 1.8 V I<sup>2</sup>C Interface, Addr<1:0> to Set Address for Multi Chip Solution
- 16-Ball, 0.4 mm Pitch, 1.56 mm x1.56 mm, WLCSP Package

### Applications

- Cell Phones
- Tablets

### Description

The FSA7830 is an 8-Channel, low-power Voltage MUX.

It integrates 8 analog switches for input voltage selection, and voltage dividers to provide 1/3, 2/3 fraction of selected voltage. With another 3 analog switches, FSA7830 provides feasibility to choose 1/3, 2/3 or 1 times of selected voltage.

FSA7830 also contains output buffer to enhance driving capability. It features over-voltage protection to ensure output less than 2 V, interrupt will be alerted at the same time.

FSA7830 supports 1.8 V I2C interface to communicate with processor, and 2 address pins to provide multi-chip solution.

### Ordering Information

Part Number	Top Mark	Operating Temperature Range	Package
FSA7830BUCX	GT	-40 to +85°C	16-Ball, 0.4 mm Pitch Wafer Level Chip Scale Package (WLCSP) Package (1.56 x 1.56 mm)

Typical Application

Figure 1. Application Diagram

## Pin Configuration

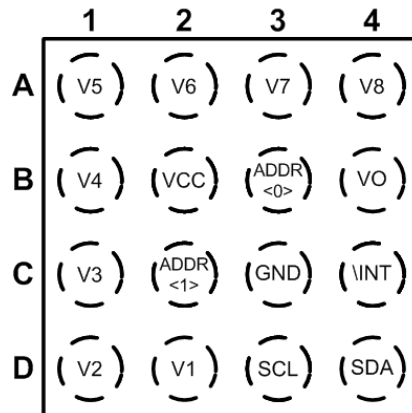

Figure 2. 16 Ball WLCSP Package(Top View)

## Pin Definitions

Pin#	Name	Description
A1	V5	Input Port 5
A2	V6	Input Port 6
A3	V7	Input Port 7
A4	V8	Input Port 8
B1	V4	Input Port 4
B2	VCC	Voltage Supply
B3	ADDR<0>	Address Pin, Bit 0
B4	VO	Output Voltage
C1	V3	Input Port 3
C2	ADDR<1>	Address Pin, Bit 1
C3	GND	Ground
C4	\INT	I2C Interrupt
D1	V2	Input Port 2
D2	V1	Input Port 1
D3	SCL	I2C Clock
D4	SDA	I2C Data

## I2C Specifications

Symbol	Parameter	Fast Mode		
		Min.	Max.	Unit
$f_{SCL}$	I2C_SCL Clock Frequency	0	400	kHz
$t_{HD,STA}$	Hold Time (Repeated) START Condition	0.6		$\mu$ s
$t_{LOW}$	LOW Period of I2C_SCL Clock	1.3		$\mu$ s
$t_{HIGH}$	HIGH Period of I2C_SCL Clock	0.6		$\mu$ s
$t_{SU,STA}$	Set-up Time for Repeated START Condition	0.6		$\mu$ s
$t_{HD,DAT}$	Data Hold Time	0	0.9	$\mu$ s
$t_{SU,DAT}$	Data Set-up Time <sup>(1)</sup>	100		ns
$t_r$	Rise Time of I2C_SDA and I2C_SCL Signals <sup>(1)</sup>	$20+0.1C_b$	300	ns
$t_f$	Fall Time of I2C_SDA and I2C_SCL Signals <sup>(1)</sup>	$20+0.1C_b$	300	ns
$t_{SU,STO}$	Set-up Time for STOP Condition	0.6		$\mu$ s
$t_{BUF}$	BUS-Free Time between STOP and START Conditions	1.3		$\mu$ s
$t_{SP}$	Pulse Width of Spikes that Must Be Suppressed by the Input Filter	0	50	ns

### Note:

1. A fast-mode I2C-bus device can be used in a standard-mode I2C-bus system, but the requirement  $t_{SU,DAT} \geq 250$  ns must be met. This is automatically the case if the device does not stretch the LOW period of the I2C\_SCL signal. If such a device does stretch the LOW period of the I2C\_SCL signal, it must output the next data bit to the I2C\_SDA line  $t_{r,max} + t_{SU,DAT} = 1000 + 250 = 1250$  ns (according to the standard-mode I2C bus specification) before the I2C\_SCL line is released.

Figure 1. Definition of Timing for Full-Speed Mode Devices on the I2C Bus

Table 1. I<sup>2</sup>C™ Slave Address

ADDR<1:0>	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0
00	1	0	0	0	0	1	0	R/W
01	1	0	0	0	0	1	1	R/W
10	1	0	0	0	1	0	1	R/W
11	1	0	1	0	1	0	0	R/W

## I2C Interface

The FSA7830 includes a full I2C slave controller. The I2C slave fully complies with the I2C specification version 2.1 requirements. This block is designed for fast mode, 400 kHz, signals.

Examples of an I2C write and read sequence are shown in below Figure 3 and Figure 4 respectively.

**Note:** Single Byte read is initiated by Master with P immediately following first data byte

**Figure 3. I2C Write Example**

**Note:** If Register is not specified Master will begin read from current register. In this case only sequence showing in Red bracket is needed

From Master to Slave	<b>S</b> Start Condition	<b>NA</b> NOT Acknowledge (SDA High)	<b>RD</b> Read =1
From Slave to Master	<b>A</b> Acknowledge (SDA Low)	<b>WR</b> Write=0	<b>P</b> Stop Condition

**Figure 4. I2C Read Example**

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit
$V_{CC}$	Supply Voltage	-0.5	6	V
V1~8	Input Voltage	-0.5	6	V
$I_{IK}$	DC Input Diode Current	-50		mA
$T_{STG}$	Storage Temperature	-65	+150	°C
MSL	Moisture Sensitivity Level (JEDEC J-STD-020A)		1	Level
ESD	Human Body Model, JEDEC: JESD22-A114	All Pins	2	kV
		I/O to GND	2	
		Power to GND	2	
	Charged Device Model, JEDEC: JESD22-C101	500	V	

## Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Max.	Unit
$V_{CC}$	Supply Voltage	2.7	5.5	V
V1~8	Input Voltage	0	5.4	V
$V_{ADDR}$	Address Pin Voltage	0	$V_{CC}$	V
$V_{SCL, SDA, INT}$	I2C Bus Voltage Swing	0	1.8	V
$T_A$	Operating Temperature	-40	+85	°C

## DC Electrical Characteristics

All typical value are for  $V_{CC}=3.7\text{ V}$  at  $T_A=25^\circ\text{C}$ , with  $100\text{ K}\Omega$  and  $100\text{ nF}+10\text{ pF}$  loading at  $VO$ , unless otherwise specified.

Symbol	Parameter	Condition	$V_{CC}$ (V)	$T_A=-40^\circ\text{C}$ to $+85^\circ\text{C}$			Unit
				Min.	Typ.	Max.	
$V_{IK}$	Clamp Diode Voltage	$I_{IN}=-18\text{ mA}$				-0.7	V
$V_{IH2C}$	High-Level Input Voltage		2.7 to 5.5	1.26			V
$V_{IL2C}$	Low-Level Input Voltage		2.7 to 5.5			0.54	V
$V_{HYSI2C}$	Hysteresis of Schmitt Trigger Inputs		2.7 to 5.5	0.09			V
$I_{I2C}$	Input Current of SDA, SCL and VINT	Input Voltage 0.26 V to 2 V	2.7 to 5.5	-10		10	$\mu\text{A}$
$I_{CCTI2C}$	$V_{CC}$ current when SDA or SCL is HIGH	Input Voltage 1.8 V	5.5			1	$\mu\text{A}$
$V_{IHADDR}$	High-Level Input Voltage		2.7 to 5.5	1.26			V
$V_{ILADDR}$	Low-Level Input Voltage		2.7 to 5.5			0.54	V
$V_{HYSADDR}$	Hysteresis of Schmitt Trigger Inputs		2.7 to 5.5	0.09			V
$V_{OLSDA}$	Low-Level Output Voltage of SDA Pin	4 mA Sink Current (Open-Drain)	2.7 to 5.5			0.36	V
$V_{OLINTN}$	Low-Level Output Voltage of VINT	4 mA Sink Current (Open-Drain)	2.7 to 5.5			0.36	V
$R_{ON1}$	Switch1 On Resistance		2.7 to 5.5		100	200	$\Omega$
$R_{ON2}$	Switch2 On Resistance <sup>(2)</sup>		2.7 to 5.5		100	200	$\Omega$
$R_{VD}$	Voltage Divider On Resistance <sup>(2)</sup>		2.7 to 5.5	1			$\text{M}\Omega$
$I_{CC}$	Quiescent Supply Current	All blocks in Enable Mode	2.7 to 5.5			100	$\mu\text{A}$
$I_{CCZ}$	Disable Mode Leakage Current		2.7 to 5.5	-1		3.9	$\mu\text{A}$
$I_{LEAK,ON}$	Leakage Current of each channel from V1-8 to GND in Enable Mode					2	$\mu\text{A}$
$I_{LEAK,OFF}$	Leakage Current of each channel from V1-8 to GND in Disable Mode					1	$\mu\text{A}$
$V_{OFFSET}$	Offset Voltage introduced by FSA7830, referring to $VO$		2.7 to 5.5	-10		10	mV
$V_{OVP}$	Over-Voltage Protection Threshold (Low to High)	Register 06h set to '00'	2.7 to 5.5	1.87	2.00	2.15	V
$V_{OVP,HYS}$	Over-Voltage Assertion Hysteresis		2.7 to 5.5		50		mV
$V_{CLAMPING}$	Clamping Voltage on $VO$ when OVP happens	Register 06h set to '00'	2.7 to 5.5	1.87	2.00	2.15	V
$V_{O,DYNAMIC}$	$VO$ Dynamic Range	100 $\text{K}\Omega$ between $VO$ to 0.9 V, output buffer has the ability to drive the target value with maximum 1% mismatch	2.7 to 5.5	0.5		2.1	V

**Note:**

- Guaranteed by Design.

## AC Electrical Characteristics

All typical value are for  $V_{CC}=4.2\text{ V}$  at  $T_A=25^\circ\text{C}$ , with  $100\text{ K}\Omega$  and  $100\text{ nF}+10\text{ pF}$  loading at VO, unless otherwise specified.

Symbol	Parameter	Condition	$V_{CC}$ (V)	$T_A=-40^\circ\text{C to }+85^\circ\text{C}$			Unit
				Min.	Typ.	Max.	
$C_i$	Input Capacitance on V1~8 <sup>(3)</sup>	F=1 MHz	2.7 to 5.5			50	pF
$t_{SETTLING}$	VO Settling Time after each Switching <sup>(3)</sup>	$R_S=50\ \Omega$ , $C_O=100\text{ nF}+10\text{ pF}$ , $R_O=100\text{ K}\Omega$ , VO reaches 99% of target value	2.7 to 5.5			200	$\mu\text{s}$
$t_{LOADRESPONSE}$	VO Buffer Load Response, Settling Time of Load Change <sup>(3)</sup>	Loading on VO switches from $100\text{ nF}$ to $C_O=100\text{ nF}+10\text{ pF}$ , $R_O=100\text{ K}$ . VO reaches 99% of target value	2.7 to 5.5			150	ns
PSRR	Power Supply Rejection Ratio of VO from $V_{CC}$	Power supply noise, F=217 Hz, $V_{pp}=50\text{ mV}$ , $C_O=100\text{ nF}+10\text{ pF}$ , $R_O=100\text{ K}\Omega$	2.7 to 5.5		70		dB
Xtalk	Cross Talk between V1~8	F=500 KHz, $V_{pp}=50\text{ mV}$ , $C_O=100\text{ nF}+10\text{ pF}$ , $R_O=100\text{ K}\Omega$	2.7 to 5.5		80		dB

**Note:**

- Guaranteed by characterization and not tested in production.

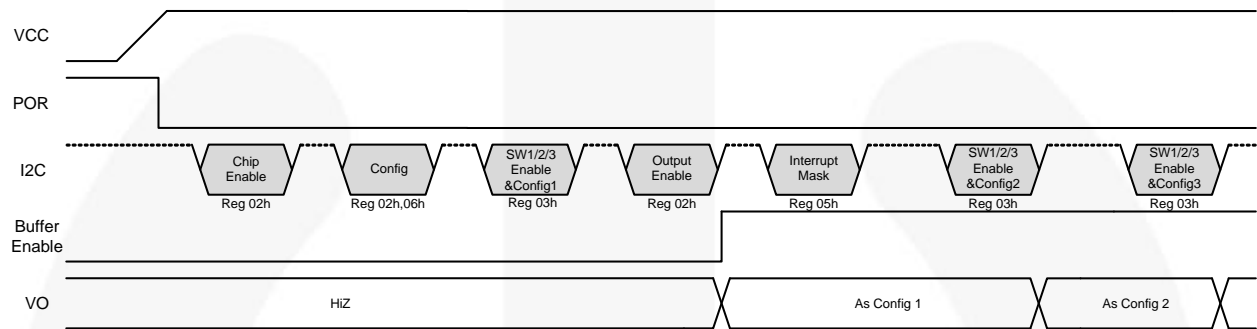

## Application Information

### Interrupt operation

The \INT pin is an active low, open drain output which indicates to the host processor that an interrupt has occurred in the FSA7830 which needs attention. The \INT pin is HIGH-Z by default after power-up or device reset.

The \INT pin stays HIGH-Z in preparation of future interrupts. When an interruptible event occurs, \INT is driven LOW and is HIGH-Z again when the processor clears the interrupt by reading the interrupt registers.

Subsequent to the initial power up or reset; if the processor writes a “1” to one of interrupt mask bits when the system is already powered up, the \INT pin stays HIGH-Z and ignores corresponding interrupt until the interrupt mask bit is cleared. If an event happens that would ordinarily cause an interrupt when the interrupt mask bit is set, the \INT pin goes LOW when the interrupt mask is cleared.

**Figure 5. Typical Application Sequence**

### Buffer & Clamping Enable Truth Table

To prevent non-ideal waveforms on VO node, enable of Output Buffer and Clamping circuitry depends on status of multi-internal register values.

**Table 2. Register Map**

Registers					Buffer & Clamping Enable
Chip Enable	SW1 Enable	SW2 Enable	SW3 Enable	Output Enable	
0	x	x	x	x	0
1	0	x	x	x	0
1	x	0	x	x	0
1	1	1	x	0	0
1	1	1	x	1	1

## Register Definitions

**Table 3. Register Map**

Address	Register Name	Type	Rst Val	Description
0x01	Device ID	RO	08	Device Version and Revision
0x02	Control	RW	00	Device Control

**AUTHORIZED USE**

Unless otherwise specified in this data sheet, this product is a standard commercial product and is not intended for use in applications that require extraordinary levels of quality and reliability. This product may not be used in the following applications, unless specifically approved in writing by a Fairchild officer: (1) automotive or other transportation, (2) military/aerospace, (3) any safety critical application – including life critical medical equipment – where the failure of the Fairchild product reasonably would be expected to result in personal injury, death or property damage. Customer's use of this product is subject to agreement of this Authorized Use policy. In the event of an unauthorized use of Fairchild's product, Fairchild accepts no liability in the event of product failure. In other respects, this product shall be subject to Fairchild's Worldwide Terms and Conditions of Sale, unless a separate agreement has been signed by both Parties.

**ANTI-COUNTERFEITING POLICY**

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Terms of Use

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

**PRODUCT STATUS DEFINITIONS**

**Definition of Terms**

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
