

LM2930

LM2930 3-Terminal Positive Regulator

Literature Number: SNVS745C

LM2930

3-Terminal Positive Regulator

General Description

The LM2930 3-terminal positive regulator features an ability to source 150 mA of output current with an input-output differential of 0.6V or less. Efficient use of low input voltages obtained, for example, from an automotive battery during cold crank conditions, allows 5V circuitry to be properly powered with supply voltages as low as 5.6V. Familiar regulator features such as current limit and thermal overload protection are also provided.

Designed originally for automotive applications, the LM2930 and all regulated circuitry are protected from reverse battery installations or 2 battery jumps. During line transients, such as a load dump (40V) when the input voltage to the regulator can momentarily exceed the specified maximum operating voltage, the regulator will automatically shut down to protect both internal circuits and the load. The LM2930 cannot be harmed by temporary mirror-image insertion.

Fixed outputs of 5V and 8V are available in the plastic TO-220 and TO-263 power packages.

Features

- Input-output differential less than 0.6V
- Output current in excess of 150 mA
- Reverse battery protection
- 40V load dump protection
- Internal short circuit current limit
- Internal thermal overload protection
- Mirror-image insertion protection
- P+ Product Enhancement tested

Voltage Range

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Input Voltage	
Operating Range	26V
Overvoltage Protection	40V
Reverse Voltage (100 ms)	-12V

Reverse Voltage (DC)	-6V
Internal Power Dissipation (Note 2)	Internally Limited
Operating Temperature Range	-40°C to +85°C
Maximum Junction Temperature	125°C
Storage Temperature Range	-65°C to +150°C
Lead Temp. (Soldering, 10 seconds)	230°C

Electrical Characteristics (Note 3)

LM2930-5.0 $V_{IN}=14V$, $I_O=150\text{ mA}$, $T_J=25^\circ\text{C}$ (Note 6), $C_2=10\text{ }\mu\text{F}$, unless otherwise specified

Parameter	Conditions	Typ	Tested Limit (Note 4)	Design Limit (Note 5)	Unit
Output Voltage		5	5.3 4.7		V_{MAX} V_{MIN}
	$6V \leq V_{IN} \leq 26V$, $5\text{ mA} \leq I_O \leq 150\text{ mA}$ $-40^\circ\text{C} \leq T_J \leq 125^\circ\text{C}$			5.5 4.5	V_{MAX} V_{MIN}
Line Regulation	$9V \leq V_{IN} \leq 16V$, $I_O=5\text{ mA}$	7	25		mV_{MAX}
	$6V \leq V_{IN} \leq 26V$, $I_O=5\text{ mA}$	30	80		mV_{MAX}
Load Regulation	$5\text{ mA} \leq I_O \leq 150\text{ mA}$	14	50		mV_{MAX}
Output Impedance	100 mA_{DC} & 10 mA_{rms} , 100 Hz–10 kHz	200			$\text{m}\Omega$
Quiescent Current	$I_O=10\text{ mA}$	4	7		mA_{MAX}
	$I_O=150\text{ mA}$	18	40		mA_{MAX}
Output Noise Voltage	10 Hz–100 kHz	140			μV_{rms}
Long Term Stability		20			$\text{mV}/1000\text{ hr}$
Ripple Rejection	$f_O=120\text{ Hz}$	56			dB
Current Limit		400	700 150		mA_{MAX} mA_{MIN}
Dropout Voltage	$I_O=150\text{ mA}$	0.32	0.6		V_{MAX}
Output Voltage Under Transient Conditions	$-12V \leq V_{IN} \leq 40V$, $R_L=100\Omega$		5.5 -0.3		V_{MAX} V_{MIN}

Electrical Characteristics (Note 3)

LM2930-8.0 ($V_{IN}=14V$, $I_O=150\text{ mA}$, $T_J=25^\circ\text{C}$ (Note 6), $C_2=10\text{ }\mu\text{F}$, unless otherwise specified)

Parameter	Conditions	Typ	Tested Limit (Note 4)	Design Limit (Note 5)	Unit
Output Voltage		8	8.5 7.5		V_{MAX} V_{MIN}
	$9.4V \leq V_{IN} \leq 26V$, $5\text{ mA} \leq I_O \leq 150\text{ mA}$, $-40^\circ\text{C} \leq T_J \leq 125^\circ\text{C}$			8.8 7.2	V_{MAX} V_{MIN}
Line Regulation	$9.4V \leq V_{IN} \leq 16V$, $I_O=5\text{ mA}$	12	50		mV_{MAX}
	$9.4V \leq V_{IN} \leq 26V$, $I_O=5\text{ mA}$	50	100		mV_{MAX}
Load Regulation	$5\text{ mA} \leq I_O \leq 150\text{ mA}$	25	50		mV_{MAX}
Output Impedance	100 mA_{DC} & 10 mA_{rms} , 100 Hz–10 kHz	300			$\text{m}\Omega$

Output Noise Voltage	10 Hz–100 kHz	170			μV_{rms}
Long Term Stability		30			$\text{mV}/1000\text{ hr}$
Ripple Rejection	$f_O=120\text{ Hz}$	52			dB

Electrical Characteristics (Note 3) (Continued)

LM2930-8.0 ($V_{IN}=14V$, $I_O=150\text{ mA}$, $T_J=25^\circ\text{C}$ (Note 6), $C_2=10\text{ }\mu\text{F}$, unless otherwise specified)

Parameter	Conditions	Typ	Tested Limit (Note 4)	Design Limit (Note 5)	Unit
Current Limit		400	700 150		mA_{MAX} mA_{MIN}
Dropout Voltage	$I_O=150\text{ mA}$	0.32	0.6		V_{MAX}
Output Voltage Under Transient Conditions	$-12V \leq V_{IN} \leq 40V$, $R_L=100\Omega$		8.8 -0.3		V_{MAX} V_{MIN}

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions for which the device is functional, but do not guarantee specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which guarantee specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not guaranteed for parameters where no limit is given, however, the typical value is a good indication of device performance.

Note 2: Thermal resistance without a heat sink for junction to case temperature is 3°C/W and for case to ambient temperature is 50°C/W for the TO-220, 73°C/W for the TO-263. If the TO-263 package is used, the thermal resistance can be reduced by increasing the P.C. board copper area thermally connected to the package. Using 0.5 square inches of copper area, θ_{JA} is 50°C/W ; with 1 square inch of copper area, θ_{JA} is 37°C/W ; and with 1.6 or more square inches of copper area, θ_{JA} is 32°C/W .

Note 3: All characteristics are measured with a capacitor across the input of $0.1\text{ }\mu\text{F}$ and a capacitor across the output of $10\text{ }\mu\text{F}$. All characteristics except noise voltage and ripple rejection ratio are measured using pulse techniques ($t_{PW} \leq 10\text{ ms}$, duty cycle $\leq 5\%$). Output voltage changes due to changes in internal temperature must be taken into account separately.

Note 4: Guaranteed and 100% production tested.

Note 5: Guaranteed (but not 100% production tested) over the operating temperature and input current ranges. These limits are not used to calculate outgoing quality levels.

Note 6: To ensure constant junction temperature, low duty cycle pulse testing is used.

Typical Application

00553905

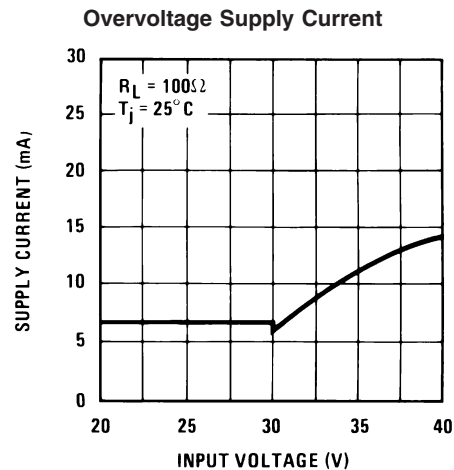

*Required if regulator is located far from power supply filter.

** C_{OUT} must be at least $10\text{ }\mu\text{F}$ to maintain stability. May be increased without bound to maintain regulation during transients. Locate as close as possible to the regulator. This capacitor must be rated over the same operating temperature range as the regulator. The equivalent series resistance (ESR) of this capacitor should be less than 1Ω over the expected operating temperature range.

Definition of Terms

Dropout Voltage: The input-output voltage differential at which the circuit ceases to regulate against further reduction in input voltage. Measured when the output voltage has dropped 100 mV from the nominal value obtained at 14V input, dropout voltage is dependent upon load current and junction temperature.

Input Voltage: The DC voltage applied to the input terminals with respect to ground.

Input-Output Differential: The voltage difference between the unregulated input voltage and the regulated output voltage for which the regulator will operate.

Line Regulation: The change in output voltage for a change in the input voltage. The measurement is made under conditions of low dissipation or by using pulse techniques such that the average chip temperature is not significantly affected.

Load Regulation: The change in output voltage for a change in load current at constant chip temperature.

Long Term Stability: Output voltage stability under accelerated life-test conditions after 1000 hours with maximum rated voltage and junction temperature.

Output Noise Voltage: The rms AC voltage at the output, with constant load and no input ripple, measured over a specified frequency range.

Quiescent Current: That part of the positive input current that does not contribute to the positive load current. The regulator ground lead current.

Ripple Rejection: The ratio of the peak-to-peak input ripple voltage to the peak-to-peak output ripple voltage.

Temperature Stability of V_O : The percentage change in output voltage for a thermal variation from room temperature to either temperature extreme.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

BANNED SUBSTANCE COMPLIANCE

National Semiconductor manufactures products and uses packing materials that meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.

Leadfree products are RoHS compliant.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
