POWER STRIPS

Premium Features

Tripp Lite combines all of the premium features found separately in competitive models into one versatile power strip. Premium features include the most outlets with the longest power cord and an illuminated on/off switch. A transparent switch cover eliminates the risk of accidental shut off and accommodates "no switch" requirement environments.

Unlimited Applications

Place a Power Strip with convenient multiple AC outlets behind a workstation to streamline the power for an entire setup. To supply safe power to an entire cabinet of equipment, mount a Power Strip inside a Tripp Lite SmartRack Enclosure using included cage nuts, mounting clips and bolts. Power Strips can also be mounted on walls, workbenches or in laboratory environments to provide easy access to power sources and centralize plug-in of various pieces of equipment. Hardwire models are also available, which can be connected directly to your AC wiring for permanent installation, and are wired for either 15- or 20-amp circuit applications.

RUGGED, VERSATILE OUTLET STRIPS FOR ALL ELECTRONICS

- **Convenient Multi-Outlet Design**
Provides up to 24 extra outlets wherever they are needed.
- **Rugged All-Metal Construction**
Stands up to demanding work environments to provide years of reliable service.
- **Widely-Spaced Outlets**
Accommodate bulky transformers without covering valuable outlets.

RACKMOUNT POWER STRIP

Tripp Lite's Rackmount Power Strip packs all the features of other power strip models into a slim 1 3/4" (1U high) rack component. 12 outlets (6 front, 6 rear) provide multiple outlets wherever you need them most.

Model #	Dimensions H x W x L	Circuit Breaker	Outlets (NEMA 5-15R)	Cord Length	Plug (NEMA type)
Standard Models
